

Grade 6 Biodiversity Website

Because all living things are connected, you are to select one living thing to build a website for. Please ensure that your species is unique and something that we can all learn from (e.g. please don't pick a dog or cat or other common animals). You may pick ANY living thing (including plants) for the specific type of species.

Your website should include the following on a few different web pages:

- Name of species (generic and scientific)
- Scientific classification
- Habitat
- How the species contributes to the diversity of life
- How do humans continue to impact the natural environment of your chosen species?
- Video about your species
- Top Ten Facts
- Other related information
- Resources (Websites, Books, etc.)

Your presentation can be done using Screencastify and should be 2 minutes in length explaining all of the above. You are the expert and your audience is here to learn about your species. Be specific and include lots of details that will be educational and exciting to your audience.
